The ultimate aim of any teaching system is to produce the best scholars & the best professionals in the today's scenario with futuristic approach so that

when given a chance they must be able to exhibit their past knowledge. To verify or quantify this knowledge the student/scholar has to undergo certain exam. Nowadays the best exams are supposed to be those having Multiple Choice Questions i.e. MCQ's as integral part because of two important reasons, First easy to conduct & uniform evaluation for all students, that is no bias, Second MCQ's checks memory/recall memory/ reasoning & ability to be precise in terms of reading /understanding and speed with ability to record answers with accuracy too. The book on this subject "Exam Success Review ANATOMY MCQ's- Volume-1, Head Neck & Brain for Medical Students – MBBS 1st Prof & PG Entrance" will be helpful as a companion for fast revision

during examination and will help them certainly to secure full marks in the Multiple Choice Questions in examination. These MCQ's make about 20% to 40% of total marks in the 1st prof. MBBS exam and anybody who knows the concepts and art to answer the MCQ's is going to be winner not only at MBBS level but also at various Postgraduate entrance Examinations at national & state level to get the PG Course of their choices.

Nolte's Essentials of the Human Brain E-Book Lippincott Williams & Wilkins
Secondary education is the final stage of compulsory education, preceded by primary education and followed by higher education. It is characterised by transition from the typically compulsory, comprehensive primary education for minors to the optional, selective tertiary, 'post-secondary', or 'higher' education (e.g., university, vocational school) for adults. Depending on the system, schools for this period or a part of it may

be called secondary schools, high schools, gymnasiums, lyceums, middle schools, colleges, vocational schools and preparatory schools, and the exact meaning of any of these varies between the systems. The exact boundary between primary and secondary education varies from country to country and even within them, but is generally around the fifth to the tenth year of education. Secondary education occurs mainly during the teenage years. In the United States and Canada primary and secondary education together are sometimes referred to as K-12 education. The purpose of secondary education can be to give common knowledge, to prepare for either higher education or vocational education, or to train directly for a profession. This new

book presents the latest research in the field.
