The purpose of this document is to identify and provide design guidelines for bridge scour and stream instability countermeasures that have been implemented by various State departments of transportation (DOTs) in the United States. Countermeasure experience, selection, and design guidance are consolidated from other FHWA publications in this document to support a comprehensive analysis of scour and stream instability problems and provide a range of solutions to those problems. The results of recently completed National Cooperative Highway Research Program (NCHRP) projects are incorporated in the design guidance, including: countermeasures to protect bridge piers and abutments from scour; riprap design criteria, specifications, and quality control, and environmentally sensitive channel and bank protection measures. Selected innovative countermeasure concepts and guidance derived from practice

outside the United States are introduced. In addition, guidance for the preparation of Plans of Action ...

Fuel cells are one of the cleanest and most efficient technologies for generating electricity. Since there is no combustion, there are none of the pollutants commonly produced by boilers and furnaces. For systems designed to consume hydrogen directly, the only products are electricity, water

and heat. Fuel cells are an important technology for a potentially wide variety of applications including on-site electric power for households and commercial buildings; supplemental or auxiliary power to support car, truck and aircraft systems; power for personal, mass and commercial transportation; and the modular addition by utilities of new power generation closely tailored to meet growth in power consumption. These applications will be in a large number of industries worldwide. In this Seventh Edition of the Fuel Cell Handbook, we have discussed the Solid State Energy Conversion Alliance Program (SECA) activities. In addition, individual fuel cell technologies and other supporting materials have been updated.

Optimization is an important tool used in decision science and for the analysis of physical systems used in engineering. One can trace its roots to the Calculus of Variations and the work of Euler and Lagrange. This natural and reasonable approach to mathematical programming covers numerical methods for finite-dimensional optimization problems. It begins with very simple ideas progressing through more complicated concepts, concentrating on methods for both unconstrained and constrained optimization.

What do all human languages have in common and in what ways are they different? How can language be used to trace different peoples and their past? Are certain languages similar because of common descent or language contact? Assuming no prior knowledge of linguistics, this textbook introduces readers to the rich diversity of human languages, familiarizing students with the variety and typology of languages around the world. Linguistic terms and concepts are explained, in the text and in the glossary, and illustrated with simple, accessible examples. Eighteen language maps and numerous language family charts enable students to place a language geographically or genealogically. A supporting website includes additional language maps and sound recordings that can be used to illustrate the peculiarities of the sound systems of various languages. 'Test yourself' questions throughout the book make it easier for students to analyze data from unfamiliar languages.

A hilarious guide to the lost art of artisanal pencil sharpening "...I am so thrilled David Rees is picking up the reins of the forgotten art of manual graphite-encased-in-wood point-crafting. I love my pencil!" —AMY SEDARIS "You may think that sharpening a pencil is easy, but David Rees makes it look hard, and that makes all the difference." —JOHN HODGMAN "Truly, my life before I was presented with correctly sharpened pencils by an artisan was a dull and ill-sharpened void. Learn from my mistakes." —NEIL GAIMAN Have you got the right kind of point on your pencil? Do you know how to achieve the perfect point for the kind of work you need out of that pencil? Deep in New York's Hudson River Valley, craftsman David Rees—the world's number one #2 pencil sharpener—still practices the age-old art of manual pencil sharpening. In 2010, he began offering his artisanal service to the world, to the jubilation of artists, writers, draftsmen, and standardized test takers. Now, Rees presents a book that is both a manifesto and a fully-illustrated walk-through of the many, many, many ways to sharpen a pencil. Including chapters on equipment, current practice, and modern technologies, it also points at new trends in sharpening, including "Celebrity Impression Pencil Sharpening (CIPS)," a warning about the "Psychological Risks Associated with Pencil Sharpening," and a survey of "Wines that tastes like pencils." As Rees implores: "Sharpening

pencils should be an activity that enriches the senses." And if you think it's a joke, why don't you poke yourself with your newly sharpened pencil? Or better yet, don't—because it'll really hurt.

Currently in the United States, 20% of children ages 6 years or younger live in poverty. Poor children have fewer opportunities than their peers to resources that are important for child development. At the same time, the prevalence of developmental disabilities has increased to 1 in every 6 children. Early identification of developmental delays is critical, and more than half of all American parents do not know the warning signs. Occupational therapy professionals in early intervention and preschool practice can provide the necessary services to support children's health in early childhood. This Practice Guideline explains the occupational therapy process for young children--and their families, caregivers, and teachers--which includes evaluation, intervention, and outcomes planning to enhance a child's occupational performance, adaptation, health and wellness, community participation, role competence, and self-advocacy. Topics include social-emotional development; feeding, eating, and swallowing;

cognitive and motor development; service delivery; autism; obesity, cerebral palsy; and parent training. This work can help occupational therapy practitioners, as well as those who manage, reimburse, or set policy regarding occupational therapy services, understand the contribution of occupational therapy in evaluating and serving young children. This guideline can also serve as a resource for parents, school administrators, educators, and other early childhood staff.

This paper focuses on the formulation of doctrine since World War II. In no comparable period in history have the dimensions of the battlefield been so altered by rapid technological changes. The need for the tactical doctrines of the Army to remain correspondingly abreast of these changes is thus more pressing than ever before. Future conflicts are not likely to develop in the leisurely fashions of the past where tactical doctrines

could be refined on the battlefield itself. It is, therefore, imperative that we apprehend future problems with as much accuracy as possible. One means of doing so is to pay particular attention to the business of how the Army's doctrine has developed historically, with a view to improving methods of future development.

How do schools worldwide treat the Holocaust as a subject? In which countries does the Holocaust form part of classroom teaching? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study, carried out by UNESCO and the Georg Eckert Institute for International Textbook Research, compares for the first time representations of the Holocaust in school textbooks and national curricula. Drawing on data which includes countries in which there exists no or little information about representations of the Holocaust, the study shows where the Holocaust is established in official guidelines, and contains a close textbook study, focusing on the comprehensiveness and accuracy of representations and historical narratives. The book highlights evolving practices worldwide and thus provides education stakeholders with comprehensive documentation about current trends in curricula directives and textbook representations of the Holocaust. It further formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.
