Thirty-four years have elapsed since the publication of the late Professor P. Maheshwari's text, *An Introduction to the Embryology of Angiosperms*, a work which for many years served as an invaluable guide for students and a rich source book for research workers. Various texts dealing with sections of the broad spectrum of topics encompassed by Maheshwari in his book have appeared in the interim, but a compendious modern work dealing with the whole field has been lacking. This present volume splendidly meets the need, and it is altogether fitting that Professor B. M. Iohri, long an associate and close colleague of Professor Maheshwari and himself a prolific contributor to the subject, should have undertaken the task of editing it. When Maheshwari wrote, it was still feasible for one author to handle the subject, but today even someone with his fine breadth of vision and depth of understanding could not, alone, do it justice. So the effort has to be a collaborative one; and Professor Iohri's achievement has been to bring together a team of authoritative collaborators, assign them their responsibilities, and put them to work to produce a text as integrated in its treatment as the diversity of the subject would allow. The product vividly illustrates the advances that have been made in the study of angiosperm reproductive systems in the last 30 years, and the book is surely destined to become the new standard for student and researcher alike.

Mycology, the study of fungi, originated as a subdiscipline of botany and was a descriptive discipline, largely neglected as an experimental science until the early years of this century. A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility, termed "heterothallism", and stimulated interest in studies related to the control of sexual reproduction in fungi by mating-type specificities. Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi. The names Burgeff, Kniep and Lindegren are all associated with this early period of fungal genetics research. These studies and the discovery of penicillin by Fleming, who shared a Nobel Prize in 1945, provided further impetus for experimental research with fungi. Thus began a period of interest in mutation induction and analysis of mutants for biochemical traits. Such fundamental research, conducted largely with *Neurospora crassa*, led to the one gene: one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958.

Fundamental research in biochemical genetics was extended to other fungi, especially to *Saccharomyces cerevisiae*, and by the

mid-1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena.

What Happens in a Man's Innermost... is a cry. Of mind and heart. Of passion and commitment. Of pleasure and pain. Of logic and analysis. Of concepts and emotions. Of why and wherefore. Of bafflement and wonderment. what happens in a man's innermost... is a soliloquy. Not of a troubled soul but of a soulful soul. Thinking out loud. what happens in a man's innermost... is,

i'm sure, not unique to this human being. whoever this 'human being' may be! i know not where from. i only know they come. Unmasked, uncalled, unbidden. flooding, forming, blending. Thoughts falling and rising, flowing and ebbing, rolling, and etching into meaty mixes. Now turbulently gushing forth, now curiously peeping and peeling, now stunningly fretting and fuming, now gently curling over. With a clarity that surprises, with a purpose that questions, with a craze that defines, with an anger that belies belief. Thoughts that frantically search, that maddeningly beckon, that beggingly plead, that pleasure and pain, that bristle and bleed. Finally, all this tumult (hue!) and cry is just storm in a teacup. All this bouncing and battering is just storm before calm. As though nothing ever was that ever was, nothing ever is that ever is, nothing ever will be that ever will be. Mutually defining the 'me' in me.
