The International Encyclopedia of Information and Library Science was published to widespread acclaim in 1996, and has become the major reference work in the field. This eagerly awaited new edition has been fully revised and updated to take full account of the many and radical changes which have taken place since the Encyclopedia was originally conceived. With nearly 600 entries, written by a global team of over 150 contributors, the subject matter ranges from mobile library services provided by camel and donkey transport to search engines, portals and the World Wide Web. The new edition retains the successful structure of the first with an alphabetical organization providing the basic framework of a coherent collection of connected entries. Conceptual entries explore and explicate all the major issues, theories and activities in information and library science, such as the economics of information and information management. A wholly new entry on information systems, and enhanced entries on the information professions and the information society, are key features of this new edition. Topical entries deal with more specific subjects, such as collections management and information services for ethnic minorities. New or completely revised entries include a group of entries on information law, and a collection of entries on the Internet and the World Wide Web.

The first book to attempt to provide a framework for analyzing disability through the ages, Henri-Jacques Stiker's now classic A History of Disability traces the history of western cultural responses to disability, from ancient times to the present. The sweep of the volume is broad; from a rereading and reinterpretation of the Oedipus myth to legislation regarding disability, Stiker proposes an analytical history that demonstrates how societies reveal themselves through their attitudes towards disability in unexpected ways. Through this history, Stiker examines a fundamental issue in contemporary Western discourse on disability: the cultural assumption that equality/sameness/similarity is always desired by those in society. He highlights the consequences of such a mindset, illustrating the intolerance of diversity and individualism that arises from placing such importance on equality. Working against this thinking, Stiker argues that difference is not only acceptable, but that it is desirable, and necessary. This new edition of the classic volume features a new foreword by David T. Mitchell and Sharon L. Snyder that assesses the impact of Stiker's history on Disability Studies and beyond, twenty years after the book's translation into English. The book will be of interest to scholars of disability, historians, social scientists, cultural anthropologists, and those who are intrigued by the role that culture plays in the development of language and thought surrounding people with disabilities.

This report examines the importance of intellectual property (IP), ranging from patents, copyright, design and trade marks, and whether in the age of globalization, digitization and increasing economic specialization it still creates incentives for innovation, without unduly limiting access to consumers and stifling further innovation. The report does recommend a radical overhaul of the system, with the review concentrating on three areas, and setting out the following recommendations: (i) strengthening enforcement of IP rights, whether through clamping down on piracy or trade in counterfeit goods; (ii) reducing costs of registering and litigating IP rights for businesses large and small; (iii) improving the balance and flexibility of IP rights to allow individuals, businesses and institutions to use content in ways consistent with the digital age.

This publication offers a critical assessment of the complicity of design in creating, perpetuating, and reinforcing social, political, and environmental problems, both today and in the past. It proposes going against the grain by problematising Western notions of design to foster situated, decolonial, and queer-feminist modes of disciplinary self-critique, and looks at design through the intersections of gender, culture, ethnicity, and class. Applying robust scholarly insight with engaging and accessible modes of conveyance and storytelling, an urgent and expansive array of voices and views emerge from those engaged in struggles with, against, or around the field of design.
