In recent years, the

topic of environmental

responsibility has been affecting policymakers and markets, and it has become a relevant issue in the multidisciplinary discussion between scientists and practitioners. Most countries have adopted

new regulations and economic instruments to support environmental sustainability; at the same time, many organisations have adopted environmental policies and management tools such as the Environmental Management System (EMS). This book reviews the past, present and future of environmental management. It combines a review of differential game models of the ecological-economic systems and respective analytical techniques with original results in game theoretic modelling of the sustainable environmental management; summarises the results derived from four

surveys conducted in Italy from 2008 to 2015, that involved the Italian ISO 14001 certified organisations in exploring their interest on the adoption of other environmental tools and labels; presents a holistic framework for analysing, assessing and improvement of environmental management in agriculture, and assesses the forms, factors and efficiency of agro-eco-management in Bulgaria during post-communist transition, European integration, and EU CAP implementation; and finally, presents key environmental and climate change challenges and opportunities in the Balkan Peninsula and in relation to alignment

to the European Union (EU).

"Science - "empirical
knowledge" - and
technology - "applied
science" - have long
played a key role in
social development. In
modern times they
have come to be seen
as absolutely essential
factors in the
achievement of
economic growth and

development. And though many dispute their ascendancy and legitimately point to their abuses, there is no escaping their presence and impact." "Taking as a main theme the central role of science and technology in economic progress, this first-of-a-kind sourcebook gathers together the perspectives and expertise of an international body of specialists in science and technology policy to examine the role of science and technology in development, and assess their social, economic, and political dimensions. The authors look at the key issues in relation to the exigencies of developing countries in the "new international context." They

emphasize the complexity of the links between science, technology, and development and the important insights to be gained from the study of these links. The authors also point out that, despite science and technology's promise of social and economic progress, such progress is less than ever an inevitable result of their application - though there is no doubt about what can be achieved through science and technology, the quest is an uncertain one."--

 read The Life and
 Death of Sophie Stark
 with my heart in my

mouth. Not only a dissection of genius and the havoc it can wreak, but also a thunderously good story.”—Emma Donoghue, New York Times bestselling author of *Room* “This novel is perceptive, subtle, funny and lingers in unexpected ways. The analysis of a woman who puts her art above all else is equal parts inspiration and warning story. Anna North makes prose look easy.”—Lena Dunham Gripping and provocative, *The Life and Death of Sophie Stark* is a haunting story of fame, love, and legacy told through the propulsive rise of an iconoclastic artist. Sophie Stark begins her filmmaking career by creating a documentary about her

obsession, Daniel, a college basketball star. But when she becomes too invasive, she finds herself the victim of a cruel retribution. The humiliation doesn’t stop her. Visionary and unapologetic, Sophie begins to use stories from the lives of those around her to create movies, and as she gains critical recognition and acclaim, she risks betraying the one she loves most. Told in a chorus of voices belonging to those who knew Sophie best, *The Life and Death of Sophie Stark* is an intimate portrait of an elusive woman whose monumental talent and relentless pursuit of truth reveal the cost of producing great art. It is “not only a dissection of genius and the havoc it can

wreak, but also a thunderously good story" (Emma Donoghue). *The Lawyer Go!* Media Entertainment Llc This report addresses the transition of research satellites, instruments, and calculations into operational service for accurately observing and predicting the Earth's environment. These transitions, which take place in large part between NASA and NOAA, are important for maintaining the health, safety, and prosperity of the nation, and for achieving the vision of an Earth Information System in which quantitative information about the complete Earth system is readily available to myriad users. Many transitions have been

ad hoc, sometimes taking several years or even decades to occur, and others have encountered roadblocksâ€"lack of long-range planning, resources, institutional or cultural differences, for instanceâ€"and never reached fruition. Satellite Observations of Earth's Environment recommends new structures and methods that will allow seamless transitions from research to practice.

The Numinous Legacy

Penguin As baby boomers reach retirement age, concerns about the financial stability of Social Security, trends in disability, health care costs, and the supply of caregivers are all at the forefront of conversation. Aging in America focuses on

the economic and demographic portrait of the senior population and answers several important questions: What is the socio-economic portrait of the senior population in my community? How has this population changed over time? Where are the most diverse or most homogenous communities? What proportion of the senior population is still working? What are their incomes? Is there affordable housing in this area for seniors? How many seniors care for grandchildren? What is the incidence of disability by type? The Decennial Census and annual American Community Survey form the basis for this aging portrait. These critical data sources

provide comparable and comprehensive statistics for all communities across the nation.

This is the extraordinary story of a remarkable woman. Doris Davidson was born in Aberdeen in 1922, the daughter of a master butcher and country lass. Her idyllic childhood was shattered in 1934 with the death of her father, after which, in order to make ends meet, her

mother was forced to take in lodgers. In part due to her father's sudden death, Doris left school at fifteen and went to work in an office, gradually rising through the ranks until she became book-keeper. Marriage to an officer in the Merchant Navy followed in 1942, then divorce, then her second marriage. Her life took the first of two major changes in direction at the age of 41, when she went back to college to study for O and A levels, followed by three years at Teacher Training College. In 1967 she became a primary school teacher, and subsequently taught in schools in Aberdeen until she retired in 1982. Not content with a quiet retirement Doris embarked on a

new 'career' and became a writer, publishing her first work in 1990. Eight books later (and another one nearly finished), she is one of the country's best-loved romantic novelists and has sold well in excess of 200,000 copies of her books. In this engaging and candid autobiography, Doris Davidson recounts her growing up in Aberdeen in the '20s and '30's, the war years, her marriage and the unexpected paths her career has followed. With her novelist's skill, she brings into vivid focus a life of rich experience in a book every bit as riveting as her works of fiction

Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may

be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of

the structure of the
