4000 M Peaks of the Alps. Normal and Classic Routes Da Capo Press

In 1970, Chris Bonington and his now-legendary team of mountaineers were the first climbers to tackle a big wall at extreme altitude. Their target was the south face of Nepal's Annapurna: 12,000 feet of steep rock and ice leading to a 26, 454-ft. summit. As serious armchair climbers will tell you, Annapurna South Face is better than all but a handful of equally gripping

classics. One could also argue that all that has happened in the big mountains in the past 30 years has come out of this expedition and out of this book. Bonington and his team—most of whom subsequently died in the mountains—re-presented a kind of "greatest generation" of modern mountaineers. They pioneered a new, bolder approach to high altitude climbing, and

this book is about how they hit the big time. 4000er-Tourenführer TeNeues A guide to the 58 Alpine peaks that exceed 4000 metres, each illustrated with photographs, ancillary diagrams and information including the easiest lines of ascent with other ascent routes and an historical commentary.
