First established in 1940, the Sturmgeschütz assault guns were purpose-built vehicles intended to support the infantry during the phase of attack and breakthrough of enemy positions. During the eastern campaign the Sturmgeschütz proved to be potent tanks destroyers, able to reliably defeat even T-34 and KV heavy tanks. Cheaper and quicker to produce than the German Panzers, it was deployed widely and with great success forming an integral part of armoured units, particularly in the final desperate days of the war when tank production could not keep up with the needs of the war effort. Drawing on original material from German archives and private collections, and replete with over 200 images, this book tells the thrilling story of the Wehrmacht's unsung workhorse in the final years of World War II.

Panzer Tracts No. 19 - Beute-Panzerkampfwagen - Czech, Polish, and French Tanks captured from 1939 to 1940 - Thanks to the efforts of Werner Regenberg in concentrating his 30 year research career on Beute-Panzer used by the German army in WWII, this book is loaded with new information on the history, organizational structure, unit strength, tactics, and types of Beute-Panzer issued to each unit. Having contacted veterans from practically every Beute-Panzer unit, Werner Regenberg has compiled a massive archive of original documents and photographs directly linked to each unit. Photos with unique unit markings have been included for most major and representative minor units with captions that correctly identify the Beute-Panzer units. In accordance with our high standards, the text and data are based solely on primary sources. The real value of the Beute-Panzer can be learned by reading the translated experience reports written by unit commanders close to the time when the

actions occurred. Over 70 clean/rare photos illustrate this 60 page book

This fully illustrated guide offers step-by-step instructions for building detailed models of German and Russian WWII tanks. This comprehensive guide is invaluable for tank modelers of all skill levels. It includes tips and techniques for building models scaled at 1/72, 1/48 and 1/35. Expert modeler Mario Eens also provides a wealth of information on the tools, paints and techniques needed to give your models an accurate and realistic finish. With this guide at your side, you'll be able to recreate the Russian T-34 at the time of the battle of Kursk, and the Su-152 in winter camouflage, as well as the German Panzer I in North Africa, and the gigantic Maus, as it might have appeared just after the war ended.

Captured Tanks in German Service: Small Tanks and Armored Tractors 1939-45

Verzeichnis lieferbarer Bücher Schiffer Pub Limited

- One of the few books that explores the design and deployment of German artillery self-propelled guns (SPGs) to support tanks and infantry during the Second World War
- A great reference book for military modellers, historians and tank wargamers interested in German SPGs
- A comprehensive guide to German SPGs between 1939 and 1945 in one volume for the very first time, including previously unpublished information on the little-known Hummel-Wespe proving that at least twelve units were

built

- Authentic camouflage suggestions for military modellers

A single towed artillery gun required a team of six horses and nine men. During the Second World War, German engineers mounted an artillery gun on top of a tank chassis; this new technology reduced the amount of valuable war resources as self-propelled guns only required a four- or five-man crew. They could also be made ready to fire more rapidly. German Self-Propelled Artillery Guns of the Second World War covers the development and use of this new weapon between 1939 and 1945. One type was successfully deployed in the invasion of France in 1940 and more were used on the Eastern Front against Soviet forces from 1941 until the end of the war. The 'Desert Fox' (Ewin Rommel) demanded artillery guns that could keep up with his panzers in North Africa. He was sent 15-cm howitzers mounted on top of Panzer II tank chassis' and captured French Army Lorraine 37L-tracked armoured supply vehicles. Rommel's forces in northern France were equipped with a variety of new self-propelled guns, which were used against the Allies on the beaches of Normandy during D-Day in 1944.

This is the story of the largest and statistically most successful tank destroyer of World War II. The Ferdinand was a true behemoth, and although only 91 examples were built, they took a

savage toll of Soviet armour in the Battle of Kursk and subsequent operations on the Eastern Front. This study explores the technical development and combat deployment of this remarkable vehicle, from its' origins in the Porsche Tiger Tank through its deployment under the designation 'Ferdinand' in the Citadel offensive, to its modification and redesignation as the 'Elefant' and final use in the desperate Battle of Berlin. Drawing on original archival material from within Germany, private collections and heretofore unpublished photographs this title is an essential illustrated history to one of the most famous armoured vehicles ever built.

It is hard to believe that in the summer of 1940, neither the Allies nor the Axis powers had any experience of large amphibious operations. German planning for Operation Sealion was concerned with pioneering new techniques and developing specialised landing craft. Remarkably, in only two months they prepared an invasion fleet of 4,000 vessels. In Operation Sealion, Peter Schenk begins by analysing and describing the vessels that were developed and deployed for the operation: converted cargo vessels and steamers, more specialised landing craft, barges and pontoons, and auxiliary vessels such as tugs and hospital ships. He then goes on to outline the strategic preparations for the landing and looks at the operational plans of, in turn, the navy, army and air force. The planned invasion is described in full detail so that the reader can follow the proposed sequence of events from loading, setting sail and the crossing of the Channel, to the landing and the early advances into southern England. Schenk uniquely estimates the chances of success. This absorbing

account of Hitler's abortive mission, more detailed than anything written hitherto, is of interest not just to the naval historian but to anyone with an interest in World War II.

This is a comprehensive description and analysis of the 38 Combat-SS Divisions. The author was granted unparalleled access to all SS personnel files housed in the Document Center in Berlin, as well as interviews with veterans who served in these units. The result of this painstaking research is the most definitive work on the Combat-SS to be published in English. The author seeks to present facts that will correct the mythology and propaganda surrounding the 38 Combat-SS divisions since 1945. Contents: Setting the Stage; The Political-Military Heritage; The Formative Years; Unreadiness; Command, Strategy, Operations, Tactics, and Training; A New Elite Formation: The Birth of the Combat-SS; The Start of Armageddon to the Goetterdaemmerung; The W-SS; Atrocities During WW II: Fact or Fiction? The Military Trials and Justice; Appendix; Bibliography.

In the summer of 1942, following the invasion of Russia the previous year, Hitler's 'Brandenburger' commando units undertook a daring operation deep inside Soviet-held territory. Disguised as members of Stalin's NKVD, the secret police dreaded by most Soviet citizens and soldiers, the Brandenburgers passed unsuspected past the Red Army's checkpoints, before launching their surprise operation to seize the vital Soviet oil facilities around Maikop – delivering them intact into Nazi hands. Featuring specially commissioned full-colour artwork, this expert assessment of the Maikop operation casts new light on German special-forces operations on the Eastern Front.

On the Soviet side, based upon lessons from the Spanish Civil War, the Red Army decided to develop a heavy “breakthrough” tank to smash enemy infantry defenses. This resulted in the KV-1 and KV-2 tanks, introduced in 1939. At the start of Operation Barbarossa, both these tanks were virtually invulnerable to the weapons of the Panzerjäger and demonstrated their ability to overrun German infantry on several occasions. This advantage gave the Red Army a window of opportunity between the fall of 1941 and the spring of 1942 to use their heavy tanks to repel the German invasion in a series of desperate counteroffensives. Yet the window of Soviet advantage was a narrow one and the duel between the Soviet KV heavy tanks and German Panzerjäger had a major impact upon the struggle for the strategic initiative in 1941-42.

Behind Soviet Lines

Germany used many types of Russian battle tanks captured during WWII, and this book gives an accurate account in both photographs and text.

**German Heavy Reconnaissance Vehicles**

This bulletin is a translation of a captured German training manual on The German Armored Division, which was published in December 1940. At that time the number of German armored divisions was being increased and their organization changed. Comments by German commanders in Libya as late as October 1941 indicate, however, that the principles expressed in this manual have proved satisfactory with little or no modification.

The charts that follow have been added to the original German manuscript. They have been compiled from G-2 sources.
