Mind-opening writing on what kids need from school, from one of education's most outspoken voices Almost no writer

on schools asks us to question our fundamental assumptions about education and motivation as boldly as Alfie Kohn. The Washington Post says that “teachers and parents who encounter Kohn and his thoughts come away transfixed, ready to change their schools.” And Time magazine has called him “perhaps the country’s most outspoken critic of education’s fixation on grades [and] test scores.” Here is challenging and entertaining writing on where we should go in American education, in Alfie Kohn’s unmistakable voice. He argues in the title essay with those who think that high standards mean joylessness in the classroom. He reflects thoughtfully on the question “Why Self-Discipline Is Overrated.” And in an essay for the New York Times, which generated enormous response, he warns against the dangers of both punishing and praising children for what they do instead of parenting “unconditionally.” Whether he’s talking about school policy or the psychology of motivation, Kohn gives us wonderfully provocative—and utterly serious—food for thought. This new book will be greeted with enthusiasm by his many readers, and by teachers and parents seeking a refreshing perspective on today’s debates about kids and schools.

Teach Like a Champion 2.0 ASCD  
 “The most talked-about education book this semester.” —New York Times  
 From the author of *Coming Apart*, and based on a series of controversial Wall Street Journal op-eds, this landmark manifesto gives voice to what everyone knows about talent, ability, and intelligence but no one wants to admit. With four truths as his framework, Charles Murray, the bestselling coauthor of *The Bell Curve*, sweeps away the hypocrisy, wishful thinking, and upside-down priorities that

grip America’s educational establishment. •Ability varies. Children differ in their ability to learn, but America’s educational system does its best to ignore this. •Half of the children are below average. Many children cannot learn more than rudimentary reading and math. Yet decades of policies have required schools to divert resources to unattainable goals. •Too many people are going to college. Only a fraction of students struggling to get a degree can profit from education at the college level. •America’s future depends on how we educate the academically gifted. It is time to start thinking about the kind of education needed by the young people who will run the country.

In spite of soaring tuition costs, more and more students go to college every year. A bachelor's degree is now required for entry into a growing number of professions. And some parents begin planning for the expense of sending their kids to college when they're born. Almost everyone strives to go, but almost no one asks the fundamental question posed by Academically Adrift: are undergraduates really learning anything once they get there? For a large proportion of students, Richard Arum and Josipa Roksa's answer to that question is a definitive no. Their extensive research draws on survey responses, transcript data, and, for the first time, the state-of-the-art Collegiate Learning Assessment, a standardized test administered to students in their first semester and then again at the end of their second year. According to their analysis of more than 2,300 undergraduates at twenty-four institutions, 45 percent of these students demonstrate no significant improvement in a range of skills—including critical thinking, complex reasoning, and writing—during their first two years of college. As troubling as their findings are, Arum and Roksa argue that for many faculty and administrators they will come as no surprise—instead, they are the expected result of a student body distracted by socializing or working and an institutional culture that puts

undergraduate learning close to the bottom of the priority list. Academically Adrift holds sobering lessons for students, faculty, administrators, policy makers, and parents—all of whom are implicated in promoting or at least ignoring contemporary campus culture. Higher education faces crises on a number of fronts, but Arum and Roksa's report that colleges are failing at their most basic mission will demand the attention of us all.

A practical and systematic approach to deepening student engagement, promoting a growth mindset, and building a classroom culture that truly supports thinking and learning. Every student deserves access to deep and

rigorous learning. Still, some persistent myths about rigor can get in the way-- such as the belief that it means more or harder work for everyone, rather than challenging and advancing students' thinking. So how can teachers get more clarity on rigor and foster more meaningful learning in their classrooms. In *Rigor by Design, Not Chance*, veteran educator Karin Hess offers not only a clear vision of what makes learning deep and rigorous but also a systematic and equitable approach for engaging students of all ages in rich learning tasks. To that end, she outlines five essential teacher moves that foster thinking and learning: 1. Ask a series of probing questions of increasing complexity. 2. Build schemas in each content area. 3. Consider ways to strategically scaffold learning. 4. Design complex tasks that emphasize transfer and evidence-based solutions. 5. Engage students in metacognition and reflection throughout the learning process. From there, Hess details how to create an "actionable" assessment cycle that will drive learning forward in any classroom. This book offers a treasure trove of strategies, student "look-for" behaviors, and templates to guide teachers in their work as well as an array of rich performance-based assessments to engage and challenge students. School leaders and instructional coaches can also benefit from the variety of teacher-friendly supports to foster rigorous learning in their schools. Ultimately, *Rigor by Design, Not Chance* helps educators empower students to take greater ownership of their own learning. [Feel-Bad Education](#) Routledge

A New York Times Best Seller Merging real stories with theory, research, and practice, a prominent scholar offers a new approach to teaching and learning for every stakeholder in urban education. Drawing on his own experience of feeling undervalued and invisible in classrooms as a young man of color and merging his experiences with more than a decade of teaching and researching in urban America, award-winning educator Christopher Emdin offers a new lens on an approach to teaching and learning in urban schools. *For White Folks Who Teach in the Hood...and the Rest of Y'all Too* is the much-needed antidote to traditional top-down pedagogy and promises to radically reframe the landscape of urban education for the better. He begins by taking to task the perception of urban youth of color as unteachable, and he challenges educators to embrace and respect each student's culture and to reimagine the classroom as a site where roles are reversed and students become the experts in their own learning. Putting forth his theory of Reality Pedagogy,

Emdin provides practical tools to unleash the brilliance and eagerness of youth and educators alike—both of whom have been typecast and stymied by outdated modes of thinking about urban education. With this fresh and engaging new pedagogical vision, Emdin demonstrates the importance of creating a family structure and building communities within the classroom, using culturally relevant strategies like hip-hop music and call-and-response, and connecting the experiences of urban youth to indigenous populations globally. Merging real stories with theory, research, and practice, Emdin demonstrates how by implementing the “Seven C’s” of reality pedagogy in their own classrooms, urban youth of color benefit from truly transformative education.
