This training guide
diminishes the dangers
and doubles the thrill--

and safety--of flying
single-engine aircraft
at high altitudes in
mountainous regions.
Logically organized by
phases of flight--from
preflight preparation to
landings--the author
combines statistics,
techniques, and
examples of actions
(correct and incorrect)

that real pilots have taken in actual flight scenarios. * Details training that offsets mountain flying mistakes * Describes the effects of altitude on pilots and aircraft * Outlines cold weather operations and precautions * Includes search and rescue operation procedures * Reviews take-off conditions from airport mountains

The AOPA Pilot McGraw Hill Professional

Since the time of its inception, the field of aviation has rapidly grown in both importance and popularity. The acceptance and recognition of women's participation and achievements in this activity, however, did not develop with nearly the same speed. The first biographical

history of women pilots in Alaska, this work explores the challenges faced by women of Alaska as they pursued roles in aviation--something that had long been considered part of "the men's world".

Beginning in 1927 with Marvel Crosson and reaching to the present day, 37 adventurous and personal tales are offered, including that of an ultralight flyer, the first woman to become U.S. Aerobic Champion, a parachute jumper, the first woman to fly in a small airplane over the North Pole and an Iditarod dog musher. Questions about why these women chose to fly; where they learned; when they soloed; what it meant to them to become a pilot; what challenges they faced

in such a non-traditional role; and why they chose the skies of Alaska are addressed as these intriguing stories are told.

Flying a small plane to Alaska is an adventure many pilots only dream of. In 2008, the author, a student pilot, and his brother, a flight instructor, embarked on this adventure in an airplane old enough to be their mother. On their journey, they examined how to fit twelve feet eight inches worth of grown men into one of the smallest cockpits on earth--for as many as eight hours a day. They visited places they had planned on going, to see friends and relatives, and made unintended stops in places they hadn't ever heard of. They waited out weather, waited on maintenance, and

wrapped the whirlwind of learning to fly into one of the grandest cross-country trips imaginable. In the end, they covered in two weeks what takes commercial air carriers only a few hours to accomplish--but they had a lot more fun--and a much better view.
