Technical News Bulletin of the National Bureau of Standards New Age International Social Designs is based on a central argument that tank irrigation technology is shaped as a result of power relations in a particular historical, agrarian and social context. This technology as a matter of fact institutionalises a particular pattern of resource utilisation that favours only some users, and discriminates against others. This book proposes that technological designs are socially shaped, and that through the means of technological designs society orders itself. By means of shaping and reproducing technology, a certain form of social organisation or social arrangement is also reproduced.

An Applied Guide to Water and Effluent Treatment Plant Design is ideal for chemical, civil and environmental engineering students, graduates, and early career water engineers as well as more experienced practitioners who are transferring into the water sector. It brings together the design of process, wastewater, clean water, industrial effluent and sludge treatment plants, looking at the different treatment objectives within each sub-sector, selection and design of physical, chemical and biological treatment processes, and the professional hydraulic design methodologies. This book will show you how to carry out the key steps in the process design of all kinds of water and effluent treatment plants. It provides an essential refresher on the relevant underlying principles of engineering science, fluid mechanics, water chemistry and biology, together with a thorough description of the heuristics and rules of thumb commonly used by experienced practitioners. The water treatment plant designer will also find specific advice on plant layout, aesthetics, economic

considerations and related issues such as odor control. The information contained in this book is usually provided on the job by mentors so it will remain a vital resource throughout your career. Explains how to design water and effluent treatment plants that really work Accessible introduction to, and overview of, the area that is written from a process engineering perspective Covers new treatment technologies and the whole process, from treatment plant design, to commissioning **Descriptive Index of Current Engineering Literature** Butterworth-Heinemann An early American architectural manual taken from an important French work, it is a comprehensive treatment of the fundamentals of mechanical drawing including shading and perspective. The plates illustrating geometrical, mechanical and architectural shapes are meant to assist the draughtsman in his work.

This Book Presents A Comprehensive Treatment Of The Various Dimensions Of Water Resources Engineering. The Fundamental Principles And Design Concepts Relating To Various Structures Are Clearly Highlighted. The Practical Application Of Design Concepts Is Emphasised Throughout The Book.The Text Is Profusely Illustrated By A Large Number Of Detailed Drawings Andphotographs. Several Worked Out Examples Are Also Included For A Better Understanding Of The Concepts.Practice Problems And Questions From Various Examinations Are Given For Exercise And Self-Test.This Revised Edition Includes * A New Chapter On River Diversion Head Works Statistical Analysis Of Rainfall And Run-Off Data * Infiltration Indices And Storage Capacity Of Reservoirs * Design Of Sarda Type Canal Drop * Additional Photographs, Diagrams And Examples.The Book Would Serve As An Ideal Text For B.E. Civil Engineering Students And Amie Candidates. Practising

Engineers And Candidates Appearing In Various Competitive Examinations Including Gate, Upsc And Ies Would Also Find This Book Very Useful.
