diamond, oval, and star.

Essential Skills and Practice, Grade K Springer Nature

This book presents an interdisciplinary approach to conflict solution focusing on a very specific type of conflict, retributive conflicts . It is unique in the treatment of these and how relative measurement is used to find equilibrium solutions. The authors present an alternative process to address the Israeli-Palestinian conflict. They do so in two ways that are different from past efforts. The first is by formally structuring the conflict and the second is the manner in which discussions were conducted and conclusions drawn. The approach will help create a solution and provide negotiators with a unique pathway to consider the thorny issues and corresponding concessions underlying the deliberations, together with their implementation. The Analytic Hierarchy Process (AHP) provides a way to conflict solution with the participation of negotiators for the parties. It is a positive approach that makes it possible to reason and express feelings and judgments with numerical intensities to derive priorities. With the assistance of panels of Israeli participants and Palestinian participants brought together in 2006 to 2017, AHP was applied for the first time in a group setting to the Palestinian-Israeli conflict. The process makes it clear that moderation in different degrees by both sides is essential to arrive at acceptable agreements on concessions proposed and agreed upon by both sides.

First Book of Shapes and Colors Stickers Primary Concepts

Realia Remedia Publications

It is a common misconception that children on the autism spectrum find mathematics easy. In fact the opposite is true for some, and exposure to basic mathematics in the early years can be crucial in establishing the foundations for understanding later in life. This book provides practical strategies and tools for teaching key mathematics concepts to children with an autism spectrum disorder and other developmental delays. The authors emphasise the importance of incorporating a child's special interest into learning in order to help them engage fully with new concepts. Topics covered include colours, shapes, categories, numerals, sequencing, addition and subtraction and using money, and the book includes worksheets and activities for incorporating mathematics into daily living skills. This is an essential resource for teachers, teaching assistants and parents who wish to develop mathematics skills in children with an autism spectrum disorder and other developmental delays.
