Management of Acute Hand Injuries Oxford University Press, USA

This book presents 100 cases covering all areas of reconstructive surgery. Divided into six parts (Head/Neck, Upper Extremity, Lower Extremity, Trunk, Breast and Lymphedema), it guides the reader through the difficult path of problem diagnosis, analysis and decision-making, presenting concrete steps and techniques for the successful management of patients with specific reconstructive needs. Each full-color case starts with a patient profile and continues with the diagnosis, key decisions, treatment plan, surgical procedure(s) and technical steps, postoperative management, outcome and case conclusion. Further, each case includes a discussion of pros and cons, comments, learning points and suggestions for further reading. This book will be useful for all

surgeons actively involved or interested in Reconstructive Microsurgery and valuable for Senior Residents and Fellows in Plastic, Head and Neck, Breast Surgery and Orthopedics.

Plastic Surgery E-Book World Scientific

Written by experts from London's renowned Royal Free Hospital, Textbook of Plastic and Reconstructive Surgery offers a comprehensive overview of the vast topic of reconstructive plastic surgery and its various subspecialties for introductory plastic surgery and surgical science courses. The book comprises five sections covering the fundamental principles of plastic surgery, cancer, burns and trauma, paediatric plastic surgery and aesthetic surgery, and covers the breadth of knowledge that students need to further their career in this exciting field. Additional coverage of areas in which reconstructive surgery techniques are called upon includes abdominal wall reconstruction, ear reconstruction and genital reconstruction. A chapter on aesthetic surgery includes facial aesthetic surgery and blepharoplasty, aesthetic breast surgery, body contouring and

the evolution of hair transplantation. The broad scope of this volume and attention to often neglected specialisms such as military plastic surgery make this a unique contribution to the field. Heavily illustrated throughout, *Textbook of Plastic and Reconstructive Surgery* is essential reading for anyone interested in furthering their knowledge of this exciting field. Plastic Surgery E-Book Springer Nature

Path-Breaking Work in Plastic and Reconstructive Microsurgery by Dr. Doina Dumitrescu-Ionescu was reviewed by David Soutar for The Royal College of Surgeons of England: "This is a refreshingly original and unusual text. It is a testament to the life work of the author and her struggle to develop clinical microsurgery in Rumania. It takes the reader on a journey starting with learning the basic techniques of microsurgery, laboratory and experimental research, teaching and training. It then progresses to the building of an infrastructure for development and clinical practice, the maintenance of meticulous records and the evaluation of results. As such, the book is a very personal

account written in an informal style so that the reader can follow the author's own development and experience. "The format is unusual beginning with the author's philosophy for developing reconstructive microsurgery. It then covers personal techniques developed for peripheral techniques developed for peripheral nerve repairs and microvascular anastomosis. It is clear from early on in this book that the author's main interest lies in the management of peripheral nerves, particularly in the limbs. There is a section on reconstructive microsurgery of the brachial plexus following trauma and a section on limb replantation." Says the author, "The reconstructive microsurgery experience helped me to modernize reparative plastic surgery in Romania in reconstructive plastic surgery and reconstructive microsurgery by radically changing the surgical approach." This allowed also for new procedures in Dupuytren's Disease, Volkmann, and post-burn contractures approach, "revolutionizing everything that was repair surgery of any extremity, cephalic, superior, inferior, but also the extension of reconstructions in the large defects of suprascheletal soft parts."
