Three of the most imminent researchers in the keeping, rearing, and nutritional studies of pheasant, quail, and partridge have

combined their sixty years of experience to produce this handbook of aviculture. An indispensable tool. Upland game birds represent some of the most colorful and attractive birds in the world. Certain species of pheasants, quail, and partridges are raised for their economic importance as birds for sport shooting and as gourmet food items. Millions of these birds are harvested in the wild and on private shooting clubs. Privately owned game bird farms supply the birds that are released at shooting clubs. Some of these birds are also used for populating established or new game bird habitats. Exotic and rare species of game birds are also kept in special aviaries throughout the world, Most bird fanciers are interested only in maintaining exotics for their beauty, but some do recognize the importance of conserving the pure blood lines of species that are threatened by habitat destruction and uncontrolled hunting pressure. Many aspects of husbandry for domestic and exotic game birds are similar, yet there are important differences as to the amount of space needed for breeding stock, method of breeding (mass or pedigree mating), housing, nutrition, and egg care and incubation practices. This book was written for the purpose of updating the most recent methods used to reproduce commercial and exotic species of game birds. The most current methods of egg handling, incubation, nutrition, housing, lighting, and disease control are described for domestic and exotic species of pheasants, partridges, and quail. The authors offer detailed information on genetics, embryo development, artificial insemination techniques, and bird biology that are considered helpful to beginners, experienced game breeders, and bird biologists. This book can be used as a text or reference for

college courses in avian or upland game bird management. The Wild Game Cookbook Surrey, B.C.: Hancock House

HOW TO TRAP AND SNARE A COMPLETE MANUAL FOR THE SPORTSMAN, GAME PRESERVER, AND AMATEUR ON THE ART OF TAKING ANIMALS AND BIRDS IN TRAPS, SNARES AND NETS WITH NUMEROUS ILLUSTRATIONS BY WILLIAM CARNEGIE ("MOORMAN") "This manual is intended to provide as much practical insight into the various modes of trapping, snaring, and netting the animals and birds of the British Isles as can be furnished by writing. Whenever possible and desirable, such insight is given of the haunts and habitats of the creatures to be caught as may prove useful to the amateur or tyro, for whom it is more particularly planned, than for the professional. Every piece of work, device, trap, snare, or net described has been performed, employed, or made by the author, and it is hoped that the experience gained during many years may prove of advantage to others who may be induced to follow the Art of the Trapper, either for pastime or profit" William Carnegie, 1880. Originally published at the turn of the century, this extremely rare book has been reprinted in a high-quality hardback edition by Read Country Books. It is a complete and detailed treatise on the art of trapping, snaring and netting, written by a master of the craft and extensively illustrated throughout. Never before reprinted, this unique work is packed with information that is still of great practical value to the sporting man today. 224 pages + 8 pages of original adverts.

the Wild Turkeys, Grouse, Quail or Partridges, Wild Ducks and the Introduced Pheasants and Gray Partridges; With Special Reference to Their Food, Habits, Control of Natural Enemies and the Best Methods of Preserving and Breeding: Including, All Our ornithologists and sporting writers deplore the rapid disappearance of this wonderful food supply and often they predict the extermination of game in America. Some recommend, continually, more stringent game laws, limiting or prohibiting sport, but, since the game has continued to vanish notwithstanding such enactments, many have doubted the possibility of: saving the more valuable upland species if any shooting be permitted. There is good reason for the doubt. A large and ever increasing number of guns, each taking only a few birds during a short open season, undoubtedly produces the same result which was produced by a smaller number of guns, each taking a larger number of birds during a long open season. All naturalists agree that the absolute prohibition of field sports does some good only when the species has not been too much decimated to survive its natural enemies. All agree that even a little shooting is too much, unless the game enemies be controlled, because any slight additional check to the increase of a species must cause it rapidly to decrease in numbers. The prohibition of sport, which we have been facing, is highly undesirable. Fortunately we now know that it is unnecessary. Field sports need no defence or apology in so far as the readers of this little book are concerned. Their enemies do not realize the importance of the health-giving exercise which they denounce, or the economic value of the food which field sports can be made to produce. The distinguished ornithologist, Elliot, in his book on our

gallinaceous game birds, refers to the pleasure they yield and the incentive they provide for action and effort, when in the leafy aisles of whispering forests, or in the thickets and along the banks of the leaping stream, or in the open sky-encircled prairie, man in his quest for these game-like creatures, aided by his faithful dog, finds renewed health and strength to wrestle with the toils and troubles of his daily life. The food value of our game birds becomes more and more important as the prices of beef and mutton continue to rise, as it seems they must, as population increases. The restoration of field sports and the propagation and practical protection of our game birds have become of great economic importance. I am pleased to observe that the tendency of our legislation is in the direction of encouraging the profitable production of game. I firmly believe, with the aid of intelligent State Game Officers, the sportsmen and game farmers of America can make the game birds more plentiful than they ever were, using only a small portion of the lands suitable for game which long have been posted against all shooting. As we shall

observe, the natural enemies of game and the dogs and cats, and illegal gunners must be controlled on some of the breeding grounds if field sports are to be perpetuated in America. Since it is absolutely necessary that our game be properly preserved and multiplied on some of the farms with the farmer's consent, I am in favor of it. There is no danger of game preserving being overdone. The country is too big. We should remember, also, that for the most part it must be done on the farms where shooting already is prohibited and that such industry can harm no one.
