Health Norms and the Governance of Global Development Springer Nature Introduction to Global Health Promotion addresses a breadth and depth of public health topics that students and emerging professionals in the field must understand as the world's burden of disease changes with non-communicable diseases on the rise in low- and middle-income countries as their middle class populations grow. Now more than ever, we need to provide health advocacy and intervention to prevent, predict, and address emerging global health issues. This new text from the Society for Public Health Education (SOPHE) prepares readers with thorough and thoughtful chapters on global health promotion theories, best practices, and perspectives on the future of the field, from the individual to the global level. The world's biggest health care challenges—including HIV, malaria, heart disease, smoking, and violence, among others—are explored in detail in *Introduction to Global Health Promotion*. The state of the science, including the latest empirical data, is distilled into 19

chapters that update readers on the complex issues surrounding a variety of illnesses and conditions, and disease epidemics and individual, social, institutional, and governmental barriers to preventing them. Expert authors bring to the fore human rights issues, new uses of technology, and practical application of theory. These perspectives, along with the book's multidisciplinary approach, serve to create a well-rounded understanding of global health today. Betrayal of Trust Springer

Recognized as the most prestigious, comprehensive text on Global Health for GRADUATE programs in public and global health. *Global Health, Third Edition* (formerly titled *International Public Health*) brings together contributions from the world's leading authorities into a single comprehensive text. It thoroughly examines the wide range of global health challenges facing low and middle income countries today and the various approaches nations adopt to deal with them. These challenges include measurement of health status, infectious and chronic diseases, injuries, nutrition, reproductive

health, global environmental health and complex emergencies. Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition.

Thinking Through Resistance Routledge

A physician-anthropologist explores how public health practices--from epidemiological modeling to outbreak containment--help perpetuate global inequities. In *Epidemic Illusions*, Eugene Richardson, a physician and an anthropologist, contends that public health practices--from epidemiological modeling and outbreak containment to Big Data and causal inference--play an essential role in perpetuating a range of global inequities. Drawing on postcolonial theory, medical anthropology, and critical science studies, Richardson demonstrates the ways in which the flagship discipline of epidemiology has been shaped by the colonial, racist, and patriarchal system that had its inception in 1492. Deploying a range of rhetorical tools and drawing on his clinical work in a variety of epidemics, including Ebola in West Africa and the Democratic Republic of Congo, leishmania in the Sudan, HIV/TB in southern Africa, diphtheria in Bangladesh, and SARS-CoV-2 in the United States, Richardson concludes that the biggest epidemic we currently face is an epidemic of illusions—one that is propagated by the coloniality of knowledge production.

This fourth edition continues to provide a link between occupational health and clinical practice. It covers target organ systems that can be affected by hazardous exposures in workplaces, and it focuses on the clinical presentations, investigations and management of

affected individuals. We have retained consideration of some special issues relevant to occupational medicine practice in this new edition. The main emphasis continues to be prevention of disease and early detection of health effects. This edition of the book has been updated to include new materials, topics, and references. We have retained a few of the previous case studies and illustrations, and introduced several new ones. There are new chapters on audit and evidence-based practice and on occupational cancer. We trust that this edition addresses many of the recommendations that were provided by readers of the previous edition. We have again asked international experts to author many of the chapters. Some of the authors are from Asia, and others from the US, UK, the Middle East and Australia. All the authors will have either clinical or academic experience in occupational medicine practice. The book will be of interest to medical practitioners, especially those in primary care and doctors intending to pursue a career in occupational medicine. It would also be relevant for non-medical health and safety professionals wanting to know more about health effects resulting from occupational exposures. Other groups who may find this edition useful as a ready reference are medical students, occupational health nurses, or clinical specialists in fields such as dermatology, respiratory medicine or toxicology. The book is targeted at all those who are interested in the interaction between work and health, and how occupational diseases and work-related disorders may present. Contents: Clinical Occupational Medicine: Work and Health (David Koh and Aw Tar Ching) Diagnosis and Management of Occupational Diseases

(Aw Tar Ching, David Koh and John P Thompson)Respiratory Disorders (David Fishwick and Chris Barber)Skin Disorders (David Koh and Goh Chee Leok)Mental Health Disorders (Ken Addley and Robert Kerr)Musculoskeletal Disorders (Keith Palmer, Jane Frølund Thomsen and Sigurd Mikkelsen)Auditory Disorders (Ailin Razali and Krishna Gopal Rampal)Hematological Disorders (Ng Wee Tong and Mark Newson-Smith)Neurological Disorders (Ian Brown and Arjune Sen)Occupational Infections (Rayhan Hashmey and Aw Tar Ching)Renal Disorders (Huw Rees, Doris T Chan and Steve Riley)Cardiovascular Disorders (Mikhail S Dzeshka, Eduard Shantsila and Gregory Y H Lip)Hepatobiliary and Gastrointestinal Disorders (Ian Brown and Jane Collier)Eye Injuries and Other Disorders (Laurence Lim Shen and Wong Tien Yin)Metabolic Disorders (Tng Eng Loon and Lee See Muah)Reproductive Disorders (Lim John Wah and David Koh)Occupational Cancers (Lin Fritschi and Alison Reid)Special Issues in Occupational Medicine:Ethics in Occupational Medicine (David Koh and Lee See Muah)Occupational Medicine Practice and the Law (Lee See Muah and David Koh)Audit and Evidence-Based Occupational Medicine Practice (Yue-liang Leon Guo)Health Screening and Periodic Medical Examinations (Aw Tar Ching and David Koh)Aviation Medicine (Brian See and Gan Wee Hoe)Diving Medicine (Gregory Chan Chung Tsing)Remote Health Care (John Nelson Norman)Medical Disasters Planning and Response (Halim Mohamed and Abu Hasan Samad)Communication in Occupational Medicine (Max Lum)Cultural Aspects of Occupational Medicine Practice (Adul Bandhukul)Workers' Compensation

Schemes (Paul Cullinan)Rehabilitation and Return to Work (Nerys Williams)Prevention of Occupational Diseases (David Koh and Aw Tar Ching) Readership: Serves as a useful guide for all those who are interested in occupational medical practice. These include medical students at various levels, occupational health nurses, general practitioners, researchers or colleagues and professionals in occupational and public health and safety — in other words, for all who have committed themselves to do the best practice for the health of working people.

Global Population Health and Well-Being in the 21st Century World Scientific

This portrait of the global debate over patent law and access to essential medicines focuses on public health concerns about HIV/AIDS, malaria, tuberculosis, the SARS virus, influenza, and diseases of poverty. The essays explore the diplomatic negotiations and disputes in key international fora, such as the World Trade Organization, the World Health Organization and the World Intellectual Property Organization. Drawing upon international trade law, innovation policy, intellectual property law, health law, human rights and philosophy, the authors seek to canvass policy solutions which encourage and reward worthwhile pharmaceutical innovation while ensuring affordable access to advanced medicines. A number of creative policy options are critically assessed, including the development of a Health Impact Fund, prizes for medical innovation, the use of patent pools, open-source drug development and forms of 'creative capitalism'.

The Handbook of Global Health Policy provides a definitive source of the key areas in the field. It examines the ethical and practical dimensions of new and current policy models and their effect on the future development of global health and policy. Maps out key debates and policy structures involved in all areas of global health policy. Isolates and examines new policy initiatives in global health policy. Provides an examination of these initiatives that captures both the ethical/critical as well as practical/empirical dimensions involved with global health policy, global health policy formation and its implications. Confronts the theoretical and practical questions of 'who gets what and why' and 'how, when and where?' Captures the views of a wide array of scholars and practitioners, including from low- and middle-income countries, to ensure an inclusive view of current policy debates.

While there is increasing political interest in research and policy-making for global mental health, there remain major gaps in the education of students in health fields for understanding the complexities of diverse mental health conditions. Drawing on the experience of many well-known experts in this area, this book uses engaging narratives to illustrate that mental illnesses are not only problems experienced by individuals but must also be understood and treated at the social and cultural levels. The book includes discussion of traditional versus biomedical beliefs about mental illness, the role of culture in mental illness, intersections between religion and mental health, intersections of mind and body, and access to health care; is ideal for courses on global mental health in psychology, public health, and anthropology departments

and other health-related programs.

Global Health 101 Oxford University Press

Global Health and Volunteering: A Guide for Healthcare Professionals is designed to educate volunteers to be effective partners in delivering medical services locally and globally. Healthcare professionals are increasingly interested in global health and volunteering in areas of acute need. The biggest challenge to health in many locales is the inability to access the health care system. When people do connect with medical services, medications and surgical opportunities for chronic disease (i.e. glaucoma, diabetes, or hypertension) are often not affordable or cannot be sustained for a long period of time. The contributions in this book focus on a respectful dialog with local people and a willingness to learn from new experiences on the part of the volunteer. Skills transfer from visiting personnel to local providers is featured as a means to enhance healthcare sustainability. An appreciation of differing cultures, an understanding of the local economic conditions and challenges, and strategies for collaborating with the existing medical establishment are foundations of successful volunteer experiences as highlighted in this book. Dimensions of global health such as professionalism, religious beliefs, ethical dilemmas, traditional medicine, and alternative strategies for service are addressed by experts. Written and edited by leaders in the field, many of whom have more than two decades of experience volunteering abroad, Global Health and Volunteering: A Guide for Healthcare Professionals imparts lessons learned to help the reader avoid initial mistakes, while making the global health commitment stronger.

This book explores the pivotal role played by technology over the past decade in advancing global public health and health care. At present, the global community faces unprecedented healthcare challenges fueled by an aging population, rising rates of chronic disease, and persistent health disparities. New technologies and advancements have the potential to extend the reach of health professionals while improving quality and efficiency of service delivery and reducing costs within the public and the private health systems. The chapters highlight the barriers faced by the global healthcare workforce in using technology to promote health and human rights of communities: Role of Digital Health, mHealth, and Low-Cost Technologies in Advancing Universal Health Coverage in Emerging Economies Telehealth and Homecare Agencies Technology and the Practice of Health Education in Conflict Zones The Worldwide Digital Divide and Access to Healthcare Technology Technology for Creating Better Professional Teams to Strengthen Healthcare Systems Global Public Health Disaster Management and Technology As a resource on the evolution of technology as a valuable and integral component in the promotion and practice of public health and health care, with a focus on SDG 3 targets, Technology and Global Public Health should engage students, instructors, practitioners, and other professionals interested in public health, universal health care, health technology, digital health, and health equity. Dr. Murthy has been a respected leader and mentor on scientific health-related matters within the UN system for many years. Her book develops a theoretical system

connecting concepts that have coined global public health with the rapid development of technology, all with the focus to achieve Sustainable Development Goal number three, within the time frame set by World Leaders. - Henry L. Global Health involves, among many things the intensified travelling of people, resources, technologies, knowledge, standards, and ideas. This book describes what happens when innovations are transferred to new settings: What work is needed to make them work, but also how they change the setting into which they are introduced.

“This is a remarkable, much-needed book that fills a significant gap in the health and social care literature in the early decades of the 21st century—public, global, clinical, ecological. It is powerful, ambitious, comprehensive, and sweeping at the same time that it is visionary, focused, and deep. Its power and passion are about the potential of population health and well-being optimally applied around the globe to help in creating a world that is healthier, safer, more just, and more sustainable.” —Barbara K. Rimer, DrPH, Alumni Distinguished Professor and Dean UNC Gillings School of Global Public Health, University of North Carolina at Chapel Hill (From the Foreword) Drawing on current research and the expertise of world-recognized leaders in public, global, clinical, and social health in both developed and developing nations, this book delivers an evidence-based examination of 21st-century challenges

in global population health and well-being. With special attention given to major initiatives of the United Nations, especially its Sustainable Development Goals (SDGs) 2016–2030, and the priorities of the World Health Organization (WHO) and the World Bank, Dr. Lueddeke articulates an imperative to adopt a “One World, One Health” view that recognizes the interdependence of humans, animals, plants, and the environment. The book/text promotes innovative and transformative paradigms for global public health practice, curricula, workforce training, and leadership. Intended for undergraduate and postgraduate courses in global public health, it will also be a welcome addition to the libraries of practitioners and policy-makers at all levels in the public/population/global health continuum. **KEY CONTENT AREAS INCLUDE:** The historical context of public health from early medicine to present day Exemplary educational initiatives: WHO education guidelines; curriculum commentaries from China, South Africa, and Cuba; a proposed Global Framework for Public Health Services and Functions; and case studies from South America (PAHO/ WHO), India (IPHF), and South Africa (PHASA) The changing roles and educational expectations of public and global health professionals in the early decades of the 21st century The complex interdependence of natural, socioeconomic, and political systems at local, national, regional, and global levels The causes of interstate conflicts and longer-term challenges Leading change in a new era, transforming mind-sets, and improving and sustaining the health and well-being of the planet and its people An epilogue on global health, governance, and education with

contributions from a think tank of 35 practitioners from 27 nations Supplemental materials, including text aims and objectives and a guide to research and learning resources developed by experts in the United States, Brazil, and the Netherlands, are available as digital downloads ALSO HIGHLIGHTED: 65 profiles of leading global health (and health-related) organizations 15 profiles of highly recognized schools and institutes of public health

Participatory Visual Methodologies in Global Public Health University of California Press

'An Introduction to Global Health Delivery' is a short but immersive introduction to global health's origins, actors, interventions, and challenges. Informed by physician Joia Mukherjee's quarter-century of experience fighting disease and poverty in more than a dozen countries, it delivers a clear-eyed overview of the movement underway to reduce global health disparities and establish sustainable access to care, including details of what has worked so far - and what hasn't.

Betrayal of Trust John Wiley & Sons *Participatory Visual Methodologies in Global Public Health* focuses on the use of participatory visual methodologies such as photovoice, participatory video (including cellphilm or the use of cell phones to make videos), drawing and mapping in public health research. These approaches are modes of inquiry that can engage participants and communities, eliciting evidence about their own health and well-being, as well as modes of representation and modes of production in the co-creation of knowledge, and modes of dissemination in relation to knowledge translation and mobilization. Thus, the production by a

group of girls or young women of a set of photos or videos from their own visual perspective can offer new evidence on how, for example, they see sexual violence. Unlike other data such as those collected through surveys or even conventional interviews, the images they have produced not only inform the empirical evidence, but also do not need to remain in a laboratory or the office of a researcher. They can, through exhibitions and screenings, reach various audiences: school or health personnel, parents and community members, and perhaps also policy-makers. This collection offers a critical overview for students, practitioners, researchers and policy-makers working in or concerned with the use of participatory methodologies in public health around the globe. This book was originally published as a special issue of *Global Public Health*.

Acts of public defiance towards biomedical public health policies have occurred throughout modern history, from resistance to early smallpox

vaccines in 19th-century Britain and America to more recent intransigence to efforts to contain the Ebola outbreak in Central and West Africa. Thinking through Resistance examines a diverse range of case studies of opposition to biomedical public health policies – from resistance to HPV vaccinations in Texas to disputes over HIV prevention research in Malawi – to assess the root causes of opposition. It is argued that far from being based on ignorance, resistance instead serves as a form of advocacy, calling for improvements in basic health-care delivery alongside expanded access to infrastructure and basic social services. Building on this argument, the authors set out an alternative to the current technocratic approach to global public health, extending beyond greater distribution of medical technologies to build on the perspectives of a political economy of health. With contributions from medical anthropologists, sociologists, and public health experts, Thinking through Resistance makes important reading for researchers, students, and practitioners in the fields of public health, medical anthropology, and public policy.

Until recently, surgical services in developing countries have been neglected, despite the critical role they could play in preventing disease and saving lives. Over the last few years, world leaders, public health professionals, and surgeons have collaborated to discuss public policies, resource utilization, healthcare reform, surgical safety, and workforce issues in order to bring these life-saving services to those most in need. *Global Surgery and Public Health: A New Paradigm* offers the most current information as

well as a systematic approach to considering surgery in the context of a broader umbrella of public health. It is ideal for courses in Global/International Health, Public Health, Surgery, Medical Anthropology as well as for professionals in public policy and international health care and humanitarian groups serving the surgical needs of patients in under-resourced settings.

Bringing together the experience, perspective and expertise of Paul Farmer, Jim Yong Kim, and Arthur Kleinman, *Reimagining Global Health* provides an original, compelling introduction to the field of global health. Drawn from a Harvard course developed by their student Matthew Basilio, this work provides an accessible and engaging framework for the study of global health. Insisting on an approach that is historically deep and geographically broad, the authors underline the importance of a transdisciplinary approach, and offer a highly readable distillation of several historical and ethnographic perspectives of contemporary global health problems. The case studies presented throughout *Reimagining Global Health* bring together ethnographic, theoretical, and historical perspectives into a wholly new and exciting investigation of global health. The interdisciplinary approach outlined in this text should prove useful not only in schools of public health, nursing, and medicine, but also in undergraduate and graduate classes in anthropology, sociology, political economy, and history, among others.

Model-based Geostatistics for Global Public Health: Methods and Applications provides an introductory account of model-based geostatistics, its implementation in open-source software and its application in public health research. In the public health problems that are the focus of this book, the authors describe and explain the pattern of spatial variation in a health outcome or exposure measurement of interest. Model-based geostatistics uses explicit probability models and established principles of statistical inference to address questions of this kind. Features: Presents state-of-the-art methods in model-based geostatistics. Discusses the application these methods some of the

most challenging global public health problems including disease mapping, exposure mapping and environmental epidemiology. Describes exploratory methods for analysing geostatistical data, including: diagnostic checking of residuals standard linear and generalized linear models; variogram analysis; Gaussian process models and geostatistical design issues. Includes a range of more complex geostatistical problems where research is ongoing. All of the results in the book are reproducible using publicly available R code and data-sets, as well as a dedicated R package. This book has been written to be accessible not only to statisticians but also to students and researchers in the public health sciences. The Authors Peter Diggle is Distinguished University Professor of Statistics in the Faculty of Health and Medicine, Lancaster University. He also holds honorary positions at the Johns Hopkins University School of Public

Health, Columbia University International Research Institute for Climate and Society, and Yale University School of Public Health. His research involves the development of statistical methods for analyzing spatial and longitudinal data and their applications in the biomedical and health sciences. Dr Emanuele Giorgi is a Lecturer in Biostatistics and member of the CHICAS research group at Lancaster University, where he formerly obtained a PhD in Statistics and Epidemiology in 2015. His research interests involve the development of novel geostatistical methods for disease mapping, with a special focus on malaria and other tropical diseases. In 2018, Dr Giorgi was awarded the Royal Statistical Society Research Prize "for outstanding published contribution at the interface of statistics and epidemiology." He is also the lead developer of PrevMap, an R package where all the methodology found in this book has been implemented.
