Primum non nocere... The fact that a surgical procedure can leave any kind of pain casts a shadow over this tenet, which is seen as the basis of medical practice and anchor of its principle ethic... It is all the more surprising in that medicine has only paid attention to this paradoxical chronic pain situation for the past few years. Clarifying the knowledge acquired in this field has become all the more urgent for any care-giver today confronted by a legitimate request from patients: Why and how can a surgical procedure, which is supposed to bring relief, leave behind an unacceptable sequela? This is the approach which the contributors to this new subject of major clinical interest invite you to follow as you work your way through this book.

Graber and Wilbur's Family Medicine Examination and Board Review, Fourth Edition National Academies Press

This book is the first comprehensive, full-scale treatment of the law, politics and economics with regard to the policies and policy instruments for budget stabilization at the state level. Covering the period from 1946 through 2008 in the United States, it provides details on the methods and results of empirical tests of the effects of budget stabilization instruments on government operations, public service provision, and some other aspects of social and economic life. With the lingering effects of the most recent financial crisis and economic downturn, and the subsequent Tea Party movement advocating smaller government and deficit reduction, this book carries timely and important theoretical as well as practical implications, particularly in regard to the potential for counter-cyclical fiscal policy in mitigating negative impacts during a recession. The first contribution of the book is in public finance theory: it provides insights into the applications of the stabilization function in the context of strong government, thereby refining Keynesianism. The second aspect is in Public Choice: the creation and functioning of budget stabilization funds offer extra evidence to demonstrate that the general public provides input and voice in more than the conventional ways when it comes to policy making, even in an area dominated by strong government. The third aspect is in policy making, exploring the opportunities for refining policy tools in preparation for future downturns.

Local Government Budget Stabilization SHARC-FM

This book is the first comprehensive, full-scale treatment of the politics, law, and economics with regard to the policies and policy instruments for budget stabilization at the local level. It examines budget stabilization in the United States from the 1910s to 2010 (from adoption of public budgeting

in this country through the Great Recession). In addition, it provides details on the methods and results of empirical tests of the effects of budget stabilization instruments on government operations, key/basic services provision, and some other aspects of social and economic life at the local level, including full-purpose governments (county, metro city, municipality, township, and village) as well as special (single-) purpose governments (like school districts and transportation districts). This book dissects an important and pressing issue in public financial administration, analyzes a lesson that has been in the learning process, especially in the United States, and identifies theoretical threads for scholarly refinement, which will be put into specific contexts of policy design and implementation. This book will be of interest to scholars in political science, economics, public choice and in public administration, where it will also appeal to policy-makers.

To begin new relationships in later life is increasingly common in large parts of the Western world. This timely book addresses the gap in knowledge about late life repartnering and provides a comprehensive map of the changing landscape of late life intimacy. Part of the Ageing in a Global Context series, the book examines the changing structural conditions of intimacy and ageing in late modernity. How do longer lives, changing norms and new technologies affect older people's relationship careers, their attitudes to repartnering and in the formation of new relationships? Which forms do these new unions take? What does a new intimate relationship offer older men and women and what are the consequences for social integration? What is the role and meaning of sex? By introducing a gains-perspective the book challenges stereotypes of old age as a period of loss and decline. It also challenges the image of older people as conservative, and instead presents them as an avant-garde that often experiment with new ways of being together.
